### pH-QuinProf®

*An Unique Adventure in Teaching and Learning*

DPST pH-QuinProf®

We developed this patented electrode especially for education in schools, high schools, colleges and universities and for training in industry. The pH-QuinProf® is an improved version of the former pH-QuinTeach® electrode.

The **pH-QuinProf®** opens an excellent and demonstrative shortcut between theory and practice of pH-Measurement: The user follows the path from the instructive assembly to the easy insight and highly accurate measurements. The **pH-QuinProf®** is a self assembly kit which contains a glass body, a screw-cap with a special low-noise-coax cable and innovative pH-composite-electrodes. One electrode is the working electrode, one the reference electrode. If filled with a pH 7 buffer the zero point is exactly at pH 7. The calibration free **pH-QuinProf®** fits perfectly the DPST-Elmetron instrumentation but is compatible with any common pH-Meter.
